

MSW6T-6010-600

High Power SP6T Common Anode VHF & UHF Switch Module

Features:

- Frequency Range: 30 MHz to 512 MHz
- High Average Power Handling: +53 dBm (CW)
- High Peak Power Handling: +57 dBm
- Low Insertion Loss: < 0.5 dB
- Return Loss (Ant-Tx): >15 dBm
- Isolation: > 25 dB
- Surface Mount SP6T Switch Module: 8mm x 8mm x 2.5mm
- RoHS Compliant

Description:

The MSW6T-6010-600 SP6T Common Anode surface mount High Power silicon PIN Diode switch was designed for transmit/receive functions and switched filter bank applications operating in the 30 MHz to 512 MHz frequency range. The MSW6T-6010-600 high power switch leverages proven high reliability hybrid manufacturing processes which yield both superior RF and thermal characteristics performance when compared to MMIC or Glass Carrier based technologies. The hybrid design approach permits precise PIN Diode selection to optimize RF performance while maintaining competitive cost targets. The small form factors (8mm x 8mm x 2.5mm) offer world class power handling, low insertion loss, and superior isolation performance in a single device. The MSW6T-6010-600 symmetrical switch is tailored to minimize Transmit to Antenna loss while maximizing Transmit to Receive isolation. The extremely low thermal resistance of the hybrid assembly permits reliably handling up to +53 dBm CW power and up to +57 dBm peak RF incident power while operating at the $T_{amb} (MAX) = +85^{\circ}C$.

ESD and Moisture Sensitivity Rating

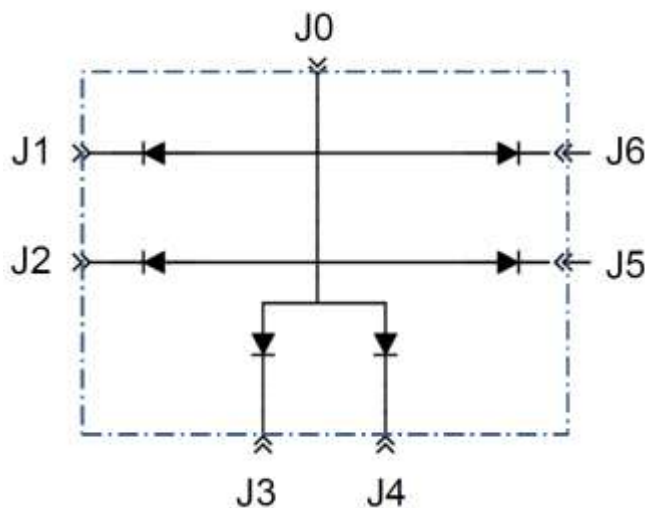

The MSW6T-6010-600 Switch Module carries a Class 1 ESD rating (HBM) and an MSL 1 moisture rating.

Thermal Management Features

A proprietary design methodology minimizes thermal resistance from the PIN Diode junction to base plate (R_{THJ-A}) to the customer's substrate and associated heat sink. This circuit topology coupled with the thermal characteristic of the substrate design enables reliably handling High Input RF Power up to 50 dBm CW and RF Peak Power levels up to +57 dBm with the base plate temperature at +85°C. The MSW6T-6010-600 has been

designed to offer superior long term reliability in the customer’s application by utilizing ultra-thin Au plating to combat Au embrittlement concerns.

Notes:

- 1) Metalized area on backside is the RF, DC and Thermal ground. In user's end application this surface temperature must be managed to meet the power handling requirements.
- 2) Back side metallization 10 – 20 Micro Inches (typ) Au termination plating to combat Au embrittlement (Au plated over Cu).
- 3) RF Cover: White Ceramic
- 4) Substrate Material: 20 mils Aluminum Nitride (AlN)

Thermal Design Considerations:

The design of the MSW6T-6010-600 permits the maximum efficiency in thermal management of the PIN Diodes while maintaining extremely high reliability. Optimum switch performance and reliability of the device can be achieved by the maintaining the base ground surface temperature of less than +85°C.

There must be a minimal thermal and electrical resistance between the bottom surface of the switch package and ground/heat sink system. Adequate thermal management is required to maintain a T_{JC} at less than +175°C and thereby avoid adversely affecting the semiconductor reliability. Special care must be taken to assure that minimal voiding occurs in the solder connection in the area shaded in red in the figure shown below:
